INTRODUCTION TO CONTINENTAL HEAT TREATING, INC.

Continental Heat Treating Inc. is an aerospace approved heat treating company located in Santa Fe Springs, California. Established in 1957 in Downey and relocated to our present facility in 1969, Continental Heat Treating, Inc. (CHT) has served the Southern California area for more than fifty years. We operate a fleet of radio dispatched trucks providing pick-up and delivery service to Los Angeles, Orange, Riverside and San Bernardino Counties. We currently have more than fifty employees, some of whom have been with company for longer than thirty years.

CHT specializes in the heat treatment and case hardening of alloy and stainless steels. Our processing capabilities include vacuum and atmosphere neutral heat treating; nitride, carburize, and carbon-nitride case hardening; hydrogen annealing; and precipitation hardening. Atmospheres include nitrogen, argon, hydrogen, and endothermic. In addition, there is in-house copper plate and copper strip for heat treating masking.

All equipment is certified and meets the latest AMS and Nadcap requirements. Also, we have most prime approvals and continue to add additional approvals as necessary to service our customers

CHT employees comprise a highly-talented and experienced group. Management personnel are all experienced heat treaters with over 175 years of industry service. Top production personnel have a combined industry experience level of over 90 years. We are proud of the expertise of our employees and attribute our success to their willingness to apply that expertise.

CHT has established a Quality Policy which reads:

"To Provide Reliable Service and Consistent Workmanship to Our Customers"
